

The sovereign phone for secure communication

End-to-end encrypted messaging, voice and video at the blockchain level — no eavesdropping, no tampering. ContiSX Phone gives institutions secure mobile communication anywhere, while they keep control of their identity, encryption keys and access. Your exchange, vault and Smart Account run natively on the same device.

● End-to-end encrypted ● Institution-controlled ● Secure anywhere

Secure the communication. **Keep the control.**

Keys never leave the device

Cryptographic keys are generated and protected in a dedicated EAL6+ secure element, isolated from the OS.

No central database

Communication is separated from the infrastructure that manages identity and authority. Self-hosted, and able to run inside isolated private networks.

Institutional authority

The institution decides who joins the network, what each user may do, and how a compromised account or device is handled.

WHO IT IS FOR

Where control is not optional

Defence & Military

- Secure command-and-control communication
- Protected voice, messaging & operational coordination
- Base and perimeter incident reporting
- Early-warning information from field units
- Communication within isolated operational networks

Law Enforcement

- Secure tactical & inter-agency communication
- Protected transmission of operational information
- Community crime-reporting channels
- Geo-tagged public-safety alerts
- Coordinated incident response

Government & Institutions

- Confidential executive communication
- Secure interdepartmental collaboration
- Protected meetings & official records
- Institution-controlled identity & access
- Secure documentation of decisions & action items

Critical Infrastructure & Enterprise

- Secure communication between leadership & field teams
- Incident reporting across multiple facilities
- Infrastructure & operational-condition monitoring
- Emergency coordination
- Trusted reporting from employees, contractors & partners
